

ComBrio VSI Service Control™

► Improves service control

Centralized access control for all 3rd party vendors

3rd party connectivity approval/denial in real time

Per device policy-based access rights

Highly scalable

► Increases security and compliance

End-to-end audit trail for regulatory requirements

User-defined reports based on device, time and authorization

Global shutdown for immediate termination of all 3rd party activity

Utilizes 128 bit SSL and AES standard encryption

► Reduces Cost

No modification required to existing network schema

No agents, modems or VPNs required

Rapid Deployment

Ubiquitous connectivity

ComBrio VSI Service Control is one of two software suites comprising ComBrio Virtual Service Infrastructure™ (VSI). ComBrio VSI is connectivity software for service organizations which provide secure remote device monitoring and management. VSI increases security, enhances regulatory compliance and improves service response times, thereby reducing costs for both the service organization and its enterprise customer.

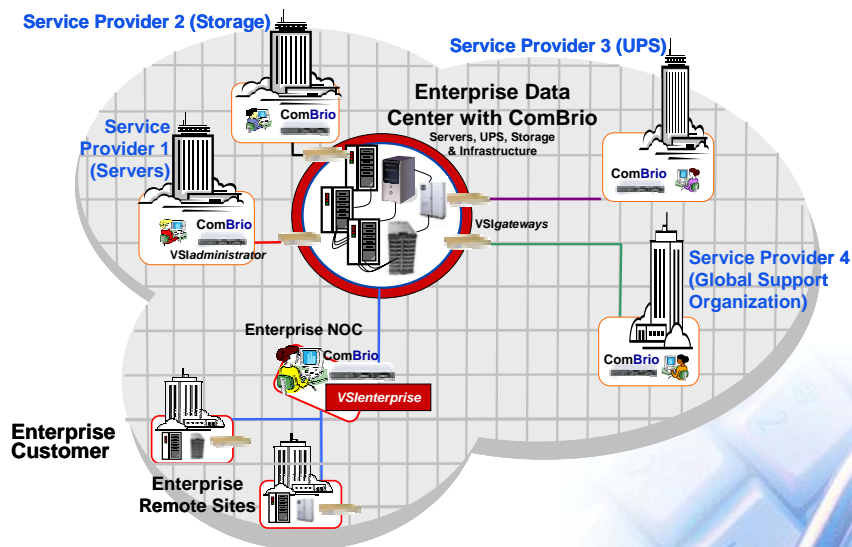

VSI Service Control eliminates enterprise security concerns by extending service approval and control to the enterprise customer. VSI Service Control enables the enterprise customer to centrally control all 3rd party vendor access in real time, while providing a local audit trail for regulatory compliance.

VSI Service Control includes the single *VSIenterprise* module and it provides:

- A single intuitive interface for real time access management of all devices contracted to a service organization(s)
- A local audit trail detailing the activities of all 3rd party service organizations utilizing ComBrio's VSI Service Delivery

VSIenterprise

VSIenterprise controls device visibility and access to all 3rd party service organizations. *VSIenterprise* can grant access permissions on an individual basis, as well as on a policy basis.

VSIenterprise's "circuit-breaker" functionality enables the enterprise to immediately terminate any/all connections, in the event of a security breach/risk.

A single *VSIenterprise* can manage multiple service organizations, while maintaining individual audit trails on each organization's activity.
